

Complex layout benchmark

Columns, table geometry, vectors, and a rotated label

Reference metric

42,000

Left column: PDF stores positioned page elements rather than flowing document structure. A converter must infer reading order and grouping.

Right column: This fixture deliberately mixes type, geometry, and vector graphics so output claims can be checked against a known page.

Item	Expected	Observed
Pages	2	2
Search token	42000	42000
Vectors	Present	Present

ROTATED VECTOR LABEL

Complex fixture - page two

Font change, page break, and selectable text remain intentional test properties.
